The symphysis pubis exhibits highly original features
including sexual features and individual differences.
In children and the majority of males the symphysis
pubis is most frequently a jointless fusion to which the
term symphysis is properly applied. The appearance
of a fissure in the centre of the fibrocartilage provides
some mobility and converts it into a hemiarthrosis
which is no longer a junction but not yet a full joint.

Trans. of Energomashinostroenie (USSR) 1961, v. 7, no. 11, p. 5-9.

DESCRIPTORS: *Boilers, *Feed water, Control systems, Pressure, Steam, Damping, Dynamics.

Factors are considered which determine the stability of the feed control system of a once-through boiler with respect to the "heat-water" ratio. A method of increasing the damping of the system is developed based on introducing an additional impulse into the feed regulator to denote the temperature of the medium at one or more points in the steam delivery line preceding the first desuperheater.
